PROFILE

I am a dedicated software developer with a degree in Information Technology and solid experience in front-end development. I specialize in building responsive and functional web solutions using technologies such as HTML, CSS, JavaScript, React, Next.js, Python, and C#. I also have hands-on experience with Python for automation and problem-solving tasks, enabling efficient and scalable solutions.

PROJECTS

UNIVERS

social Media platform that connects all university Students

- I worked on the web and mobile app design for this project
- The project was developed using React and Node.js

ML/AI Training

Synthetic Data Generation

- I am currently working on synthetic data generation, which we use to train machine learning and AI models. This approach helps address data scarcity, improve model performance, and ensure better control over data quality and labeling.

Xerox Management System

Duplication center management system

- I have worked Duplication Center/Xerox Management System for Debre Markos University using PHP, HTML and CSS.
- It was my final year project

Portfolio website

My portfolio website

- I built my personal portfolio website using React to showcase my projects, skills, and experiences

Erp next

Erp next For Tibebe Design & Build

- Trained and supported new employees on the company's ERP system to ensure smooth onboarding and use

Psynthetic

Front End Development

- Contributed to the design and development of the Psynthetic website, ensuring responsive UI/UX and smooth functionality.
